

Vote for HybSi[®] membrane Accenture Innovation Award

ECN's HybSi[®] membrane has been nominated for the Accenture Innovation Award and selected as one of the best 25 candidates for the jury award in the field of Energy & Chemicals. The HybSi[®] membrane technology can be used by the (petro-chemical) industry to separate liquids and gases. This is done, for example, in the production of biofuels or in the purification of solvents such as acetic acid or acetone.

Your support

You can support our concept by voting for the public award through the [Accenture Innovation](#) website using LinkedIn, Facebook, Twitter and e-mail.

Innovation Awards

The Accenture Awards are intended for Dutch innovative products or services. Consultancy firm Accenture wishes to make remarkable performances visible. There will be jury awards as well as a public award. The winners will be announced on 8 November 2013.

Commercial deliveries

HybSi[®] membranes have been licensed to the manufacturing companies Pervatech (www.pervatech.nl) in the Netherlands, and CTI (www.ctisa.fr) in France
